

# HOT/COLD CHEAT SHEET

## QUICK TIPS:

- If you have round or cross handles, the stems should turn off clockwise *regardless* of where they are located.
- It is *only* when using lever handles that the cartridges should close oppositely.
- On a flat surface or deck, the hot side should turn off clockwise and the cold side should turn off counter-clockwise.
- On a slanted surface or wall, the hot side should turn off counter-clockwise and the cold side should turn off clockwise.

## Our parts are identified by the direction of the thread.

How do you identify right hand and left hand threads? Quite simply!  
Reference the picture below. If the thread on the stem is going up and to the right, it is a right hand stem. If the thread on the stem is going up and to the left, it is a left hand stem.

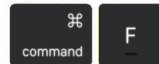

## Did you know our catalogs are keyword searchable?

Press the key command for your computer and begin typing the part name, number, or manufacturer you are searching for!
